ELECTRIC FIRES AND SURROUNDS FROM FDC

This brochure shows our latest range of electric fires and stoves featured in a selection of new and existing fireplaces from 'The Fireplace Gallery' collection.

The **Solstice** and **Equinox** can be easily fitted into a chimney breast with either a fascia panel or fireplace suite. Alternatively they can be installed into a standard cavity wall when incorporated with a suitably rebated surround. They can be fully serviced and maintained from the front with no need to remove the fire or fireplace.

The **Brooklyn** inset electric fire will fit a standard 16" fire opening. A flat wall installation is possible using a 3" rebated fireplace. With three fuel beds supplied and choice of frame and fret it will complement any interior.

The **Staten** electric stove is made from heavy gauge mild steel and has a cast iron door with a large picture window. Top quality construction, a realistic log fuel bed and high level heater make this one of the best products on the market.

DIMENSIONS

FEATURED MATERIALS

LIMESTONE

Small fossils and calcified veins (very fine black lines which can be misinterpreted as cracks) are an inherent feature of natural limestone and whilst every care is taken to select the clearest material some are likely to be present.

Due to the high moisture content of limestone, fireplaces will dry over time and become lighter in appearance.

Care must be taken before and during installation, as all fireplaces are untreated and are susceptible to discolouration. It is recommended that the completed installation is allowed to dry thoroughly and then sealed with a proprietary sealer. We recommend the 'LTP' range of Stonecare products available from your retailer.

VEINED LIMESTONE

Originating from Portugal this material contains fossilised remains resulting in natural linear veining throughout. Cool to the touch and with a smooth matt finish, this material remains one of our most popular.

ROSAL LIMESTONE

This Portuguese material is specially selected for its clarity and lack of fossiling (although some will be present). Lighter in colour than the above, the overall appearance is that of subtle shades and swirls.

CHAMOT LIMESTONE

Quarried in France this hard wearing material has a distinctive appearance. It is speckled with a myriad of small fossils, ensuring each fireplace will be truly unique.

AEGEAN LIMESTONE

Also known as Turkish limestone this off-white material is fine grained and infused with thousands of minute fossils. During the manufacturing process many of these become loosened resulting in 'pitting' across the material surface. This is a characteristic of the material and adds to the natural beauty of the product.

ANATOLIAN BROWN MARBLE

Imported from Turkey this natural marble contains a network of fine veins and brecciations. For these reasons it is stopped and filled prior to polishing, although the material will still feature surface crazing after this process.

ARISTON MICROMARBLE

This is a man made material comprising 95% natural marble and 5% resin mixed with a pigment colouring. The resulting product is consistent in colour and an attractive alternative to natural marble.

BLACK GRANITE

This is a very dense, hard wearing igneous stone with a high resistance to scratching and staining. Due to its crystalline structure granite can be highly polished or honed to a consistent colour and deep lustre.

INSTALLATION

Having a new fireplace installed is a major project and it is advisable to prepare yourself as well as possible. Please ensure your chosen fireplace will physically fit your chimney breast and that it is compatible with the intended heating appliance. The best way to confirm this will be to organise a home survey with the retailer or your installer prior to purchase. All installations must be carried out in accordance with the requirements set out in the Building Regulation documents, paying particular attention to Approved Document J. It is essential to confirm with your retailer that your new fireplace will be installed appropriately.

PRODUCT SPECIFICATION

All the fireplaces in this brochure are hand finished. As such, all measurements are approximate and may vary slightly from those published. The fireplaces are manufactured from natural materials and colour and veining variation will occur from photographs, printed material and any showroom displays that relate to these products. Any variation is outside our control and cannot be regarded as faulty or substandard. Due to the nature of the materials used in construction of these fireplaces it may be necessary to reinforce or use suitable filler to eliminate brecciation in the material. FDC (UK) Ltd has a continuous research and development programme which may necessitate changes to sizes and specifications without prior notification.

If any size is critical this should be made clear to your retailer at the point of order.

THE FDC PLEDGE

You can purchase any of the products shown in this brochure with total confidence. In the unlikely event that there is a defect discovered on unpacking, a replacement part will be supplied without hesitation.

Of course, this requires the products to be fully inspected prior to installation as no responsibility for refitting or redecoration can be accepted if defective products have been installed or products have been damaged during installation. In these cases and in the case of accidental damage after installation, in-situ repairs might be possible. Please refer to your retailer for further information.
